

The below assumes you are at the step "Test changes" in the sheet "Modify "Discover Research" application"

Test application locally

Step 1

Use admin console to harvest data from 3rd-party sources

Enter `http://localhost:8000/cron` in your browser

Press the first "Run Now" button to simulate the cron job "Clear newdata"

Press the second "Run Now" button to simulate the cron job "Add seed graph to newdata"

Press the third "Run Now" button to simulate the cron job "Harvest 3rd-party data"

Repeat the third job at least 5 times

Skip to Step 2 if you have done this before and the changes tested do not impact the cron jobs

Wait for a green confirmation message on the top of the screen before continuing

Then

Press the fifth "Run Now" button to simulate the cron job "Delete search index and rebuild from default"

Press the fourth "Run Now" button to simulate the cron job "Switch default and newdata"

Step 2

Test the web pages

Enter `http://localhost:8080/` in your browser

Test

Done
